

Takamul

# End-to-End Industrial Automation & IIoT Solutions

January 11, 2026

# Agenda

- ☐ Company Overview
- ☐ Hardware Platform
- ☐ Software Capabilities
- ☐ Full Lifecycle Services

## Introduction

Takamul is dedicated to **transforming industrial automation** through innovative solutions that enhance efficiency and scalability.

# Scalable Industrial Automation

## MARKET OPPORTUNITY

The demand for cost-effective industrial automation solutions is rapidly increasing. Takamul is poised to leverage this trend, providing innovative services tailored to diverse industries.

## IIoT Automation Solution with espressif Micro-PLCs

## Balanced Performance with STM32 Micro-PLCs for Diverse Applications

[Explore Options](#)

## High-Performance Capabilities with RISC-V Micro-PLCs

[Learn More](#)

# Micro-PLC Tiers Overview

## Economy Tier

Cost-effective for basic automation tasks, ensuring accessibility for small to mid-sized operations.

## Standard Tier

Balanced performance for diverse applications, providing versatility without compromising efficiency or cost.

# Industrial-Grade SSR

## Robust Power Management

Takamul's power handling technology utilizes **Industrial-Grade Solid State Relays (SSR)** for reliable performance. These relays ensure high-speed switching and support heavy loads while providing full galvanic isolation. Our hardware is designed for industrial compliance, enhancing safety and efficiency across automation systems.

# Software Innovation: Enhancing Industrial Control

## Modern Solutions

Node-RED dashboards replace traditional HMIs, providing a cost-effective and flexible interface for users.

## Real-Time Monitoring

Users can monitor and control operations in real time through intuitive web-based interfaces, enhancing productivity.

## Cost Efficiency

Replacing expensive HMIs with Node-RED significantly reduces costs for implementation and ongoing system management.

## Remote Access

Node-RED dashboards facilitate remote access, allowing engineers to manage industrial systems from anywhere with internet connectivity.

# Native Ladder Logic Support

Simplifying automation programming for engineers using intuitive interfaces.

---

## Overview

Takamul's programming environment features native Ladder Logic support, designed for efficiency and ease of use.

## Benefits

This approach ensures factory engineers can quickly adapt, improving productivity through intuitive programming tools that streamline debugging and maintenance processes.

openPLC software 

# Full Lifecycle Coverage

## PCB Design

Our team specializes in **innovative** PCB design tailored for industrial applications.

## Firmware Development

We provide **robust** firmware development ensuring seamless operation of your automation systems.

Our training services enhance technician skills, ensuring they can effectively deploy and maintain our solutions.

### On-Site Sessions

- Hands-on training to develop practical skills in using our systems and technologies.
- Personalized learning experiences tailored to individual technician needs and company requirements.

### Video Tutorials

- Comprehensive video resources that cover essential processes, troubleshooting, and best practices for using our automation solutions.

# Key Differentiators of Takamul

Takamul offers **custom hardware tiers** that cater to diverse industrial automation needs, ensuring scalability and flexibility.

Our **power handling technology** utilizes industrial-grade SSRs, promoting high-speed performance and reliability in demanding environments.

We deliver **modern software solutions** that enhance user experience, featuring intuitive interfaces and real-time monitoring for optimal control.

# Thank You!
